	environments. b. Demonstrate proficiency in using various tools and equipment	
	for turning, filing, drilling, welding, and assembly.	
	9. Perform practical tasks related to electrical and mechanical workshop	
	operations accurately and efficiently. d. Apply problem-solving techniques to	
	troubleshoot and rectify common issues encountered in electrical and mech	
	workshop activities.	
	10. Critical Thinking and Analysis: a. Analyze and evaluate different turning	
	processes, instrumentation measures, and cutting tools used in the workshop. b. Assess the quality of filing processes and choose appropriate rasps and tools for	
	different filing tasks.	
	11. Evaluate the drilling processes and select suitable drilling tools based on	
	specific requirements. d. Analyze welding processes, including oxy-acetylene and	
	arc welding, and determine safety precautions and best practices.	
	12. Communication and Collaboration: a. Effectively communicate and	
	collaborate with peers in group projects and workshop activities. b. Present	
	findings, results, and recommendations related to electrical and mechanical	
	workshop tasks in a clear and concise manner.	
	13. Professional and Ethical Responsibility: a. Demonstrate ethical behavior	
	responsibility in adhering to safety regulations, environmental consideration and industry standards in electrical and mechanical workshop practices	
	and mediciny standards in electrical and mechanical workshop practices	
	14. Overall, studying this subject prepares students to enter the job market in	
	various technical and engineering fields, such as industrial maintenance, electrical	
	and electronic installations, automation and robotics, medical devices, and other	
	modern technologies.	
	Indicative content includes the following.	
	Part A – Electronic workshop	
	In this part, we will learn how to check the elements in the electrical circuits, what is	
	the way each element works, how to check it, and find out what is damaged and	
	replace it. [14 hrs.]	
	We will also talk about conductors and semiconductors [10 hrs.]	
Indicative Contents	Part B – Electrical workshop

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through labs, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.
